

World Climate Zones

Vocabulary	
Precipitation	Rain, snow, sleet or hail
Humidity	The amount of moisture in the air
Flora	Plants that grow in that region
Fauna	Animals from that region
Biomes	Biomes are areas of our planet with similar climates, landscapes, animals and plants.
Ecosystems	A community of living organisms which consist of plants and animals.

Sticky Knowledge

Weather is short term. It happens in our atmosphere from day to day. It includes precipitation, temperature, wind and humidity.

Climate is long term. It is the average weather pattern of a place over many years. The main climates are: **Polar, Temperate, Subtropical, Tropical.**

Biomes include **deserts, temperate forests, tropical rainforests, grasslands, savannah, tundra and taiga.**

We live in the **temperate climate zone**, this is split into smaller biomes – ours is called the **‘deciduous forest biome’.**

Climate and Weather
 Why is climate important?
 Year 3
 Autumn 2
